

### kg/cm<sup>2</sup> to PSI Conversion

ARK Design Advanced Boost Controller (ABC) has the ability to display positive pressure in metric (kg/cm<sup>2</sup>) or standard (lb/in<sup>2</sup>-PSI) units.

To change between metric and standard:

- 1) With the vehicle off, press and hold the rocker switch.
- 2) Turn the vehicle ignition to the "ON" position. The ABC should power up and will alternate to the other pressure measuring unit.
- 3) Release the rocker switch. The selected unit of measurement will be retained as long as the 12V+ constant wire or the battery is connected.
- 4) To change back to the alternate unit measurement, repeat steps 1 to 3.

### WARNING

ALWAYS REMEMBER TO DISCONNECT THE BATTERY WHEN INSTALLING ELECTRICAL EQUIPMENT TO PREVENT AIRBAG DEPLOYMENT AND/OR CHECK ENGINE LIGHTS. FOLLOW STANDARD SAFETY INSTRUCTIONS WHEN WORKING ON YOUR VEHICLE.
